

Vashe Wound Solution Is Getting A New Label

Beginning November 2019, Vashe bottles will come with a new label, displaying “**NZT5.5**” on the front. “**NZT5.5**” stands for Natural Zone Technology, the proprietary electrochemical process by which Vashe Wound Solution is produced. Vashe’s pure hypochlorous acid (HOCl) solution is formulated at a pH of 5.5, the same pH level as healthy, healing skin. Vashe itself hasn’t changed; the new label simply highlights one part of what makes Vashe so great. Both the pour bottles and instillation bottles will feature this new label.

Just as before, Vashe will be available in the same sizes for both the pour and instillation bottles. SKUs and product codes will also remain the same, meaning no changes are necessary for direct orders or EDI systems. Available sizes include: 4.0 fl. oz. (118-ml), 8.5 fl. oz. (250-ml), 16.0 fl. oz. (475-ml), and 34.0 fl. oz. (1 liter) bottles – the three larger sizes being available as instillation bottles.

The previous label may continue to be seen over the next few months, however, the new Vashe NZT.5.5 labels will be completely implemented by the beginning of 2020. Additionally, both the bottles and shipping cases now include English, Spanish, and French translations of all product information.

Handling and temperature instructions will now be more prominently displayed on the shipping case to ensure proper storage conditions and integrity of Vashe until it is distributed for use. As always, customers are encouraged to ask their local Vashe account manager or contact Urgo’s corporate office if they have any questions, comments, or concerns regarding Vashe or any of Urgo Medical North America’s products.
